Orchid Supplies

Pot Waterer

Pot Watering Valve with 14" tip. Used to water in the pots, 14" tip allows one to reach in among the pots. Valve shuts off between pots, thus saving water.

With Aerator Tip . . . Makes a very soft stream

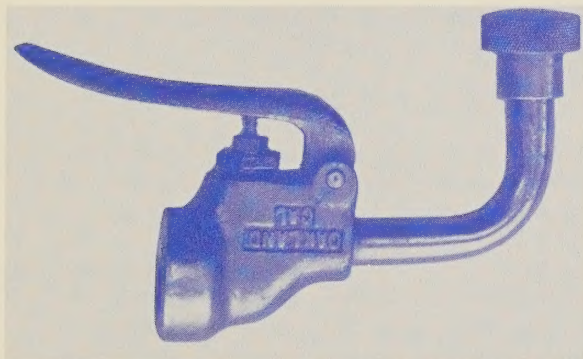

Price Each

\$7.50

Shears

Curved shears for trimming osmundae

Pair **\$3.00**

Hand Sprays

Hand Spray and Valve to fit standard hose. Used to overhead spray plants and seedlings. Makes a fine mist spray that will not disturb the potting material on seedlings. Fine for spraying in the air for humidity.

Price each

\$5.00

OSMUNDA

Florida Osmundae. Mixed brown & black.

Per Sack

\$2.25

Ivory Pine. Fir Bark.

The modern potting material.

Per Sack

\$5.00

2,50

Orchid Food

Try our Fish Emulsion for results on your seedlings, especially for Phalaenopsis.

Used at the rate of one tablespoonful to a gallon of water, once a month.

Water the plants with the solution every 30 days and see the difference.

Introductory pint can, postpaid	\$1.00
Introductory quart can, postpaid	1.90
1 Gallon can F.O.B.	4.50

CULTURE

Orchids are grown in every state in the United States and in nearly every country in the world. We have customers from Alaska to South Africa.

If a few simple rules are followed, Orchids can be grown in most any locality.

Heat, light, humidity and water are the main requirements, in Orchid growing.

Most Orchids like a temperature of 58 to 60 degrees Fahrenheit, minimum at night. With a 10 to 15 degree rise during the day.

Orchids like lots of light and fresh air, but no direct sunlight. Direct sunlight will burn the plants.

A filtered or reflected light is best. A shading of cheese cloth or spraying the glass with whiting reduces the light sufficiently, in most cases.

A high humidity of about 70° relative humidity, is the ideal condition for good growth in Orchid plants. They derive most of their feed from the moist air, as Orchid plants are mostly air feeders or epiphytes.

Orchids are grown in from small glass cases near a window, to elaborate, automatically controlled greenhouses.

As long as the conditions of light, heat and humidity are maintained, all the different growing conditions seem to give results. That is the production of flowers.

Over watering in the pots causes more damage to Orchid plants than any mistake. Let the pots dry out between waterings. One soon learns to tell when they are dry by the weight of the pots.

About once a week for a 5 inch pot is about right for average conditions. Smaller pots need watering oftener.

As no two locations are alike one has to work out the conditions best suited to his local climate.

Plants shipped in pots Railway Express collect, unless other instructions are given. For Air Express or Air Mail, plants are shipped in paper pots to reduce weight. Terms, cash with order. Add 4% sales tax on California orders.

We, N.W. CURSON - ORCHIDS, give no warranty, expressed or implied as to the productiveness of any plants we sell and will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the plants.
